DETAILED ACTION

Specification

The objection to the specification in the previous office action is withdrawn.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-2, 72 and 91-92 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nestell (US Pat# 5,925,020).

Nestell discloses a needle point barrier that includes a monolithic needle hub including a collar and a shield having a proximal end receivable by the collar (see figure 2). The collar has an internal cavity that is configured to receive the proximal end of the shield (30). The shield has a plurality of hingedly connected segments (see figures). The shield is extensible between a retracted position and an extended position (see figures 3-5). The shield also has a relief portion (42) adjacent at least one hinge and configured to flex inwardly. The distal end of the shield has a linear bearing (see figure 7 #72) which is hingedly connected to portion #38 of the shield and is moveable relative to portion #38 of the shield.

Nestell meets the claim limitations as described above but fails to include the proximal end of the shield (30) and the collar being in interlocking engagement. However, Nestell teaches

Art Unit: 3763

that the proximal end of the shield (30) is in interlocking engagement with the center of the needle hub, see 3:18-21.

At the time of the invention, it would have been obvious to rearrange the locking mechanism to be between the proximal end of the shield (30) and the collar portion of the needle hub. The mere reversal or rearrangement of parts is considered to be obvious by the courts and the motivation for making the reversal or rearrangement would have been obvious since the disclosure teaches multiple ways to connect the two sections. Additionally, connecting the proximal end of the shield to the collar portion of the needle hub would provide a safety mechanism to prevent the central hub from being removed from the syringe thereby enhancing the safety of the device to the patient and medical technician.

Allowable Subject Matter

Claims 5-20,23,25,27-31,60,62-65 and 69-71 are allowed.

Claims 3-4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments filed 5/22/03 have been fully considered but they are not persuasive. Applicant's arguments fail to comply with 37 CFR 1.111(b) because they amount to

Application/Control Number: 09/892,593

Art Unit: 3763

a general allegation that the claims define a patentable invention without specifically pointing out how the language of the claims patentably distinguishes them from the references.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Catherine Serke whose telephone number is 703-308-4846. The examiner can normally be reached on Monday - Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian Casler can be reached on 703-308-3552. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9302 for regular communications and 703-872-9303 for After Final communications.
